

Zimbabwe's Kowo Primary School has water access onsite!

Today we are celebrating the generosity of KidsCrossing kids.

\$9,779.11 was given during last year's Christmas offering and went towards our partnership with LWI to co-sponsor this piped system.

**15 tap stations
were installed!**

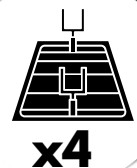

5,000-liter storage tank

**Hand wash tap stations
installed outside bathrooms**

Previously, KOWO's only water source was a hand pump located approximately 400 meters - think four football fields - from the school grounds.

As a result, they had to manually transport water in buckets to fill handwashing stations and for use of drinking water.

Now, they are now able to focus more on education and less on the daily challenge of accessing clean water.

Scan this QR code for more info and videos about our partnership with LWI.
